Contact Organics Revolutionary New Non-Toxic Bioherbicide Available For Purchase Online

An effective non-toxic answer to glyphosate

Maurice, Iowa (June 14, 2021) - Contact Organics has launched its US webstore. Now you can purchase the full product range online. Contact Organics currently offers two products that when combined provide optimal performance: Weed Terminator 20 Bioherbicide and Boost Performance Enhancer. Visit www.contactorganics.com to buy these products or for information about our patented delivery technology, specific weed management, and much more.

© Contact Organics

In light of the recent multibillion dollar awards in the thousands of lawsuits linking glyphosate to lymphoma, there is great demand for a safe and effective method of weed control around our farms and communities. Contact Organics is the answer. Our first US shipment sold out throughout the Southern US, and customers are reordering. Now you can order your Contact Organics Weed Terminator Pack online.

In answer to the incontrovertible science showing the need to reduce our exposure to toxins, Contact Organics has created a technology that allows for a low concentration of acetic acid (as in household vinegar) to achieve rapid efficacy at killing weeds while protecting our families and the soil biology. Our product even manages tough invasives like Canadian thistle or tropical soda apple. After the first couple of sprays, control is established and you will achieve a 6-8 week spread between applications, making Contact Organics cost effective. It is easy on your equipment and safe for use on farms and in gardens, at schools and parks, and in open spaces.

About Contact Organics

Contact Organics develops and manufactures proprietary, high performance, non-toxic weed management products. In the United States, the company markets and distributes them under **Contact Organics Weed Terminator 20** and **Contact Organics Boost** labels for domestic, commercial, public and amenity applications. **Contact Organics** holds a strong patent portfolio, and its growth is fueled by the global trend toward environmentally sustainable weed management and agriculture. Established in Australia in 2015, the company Headquarters are in Melbourne. Contact Organics products are manufactured in Bangkok, Thailand. The Company has secured regulatory approvals in key world markets and is setting up global distribution channels.
